

Husky® D-Line Solution

JVH Engineering has designed a controls platform utilizing Rockwell Software® and an Allen-Bradley CompactLogix® system. This platform has been used to create a predesigned solution for Husky® D-Line injection molding machines. These tested solutions use the most up to date Allen-Bradley® technology along with customer specified Rockwell Software® to allow for ease of use. All our solutions are designed with the intent of delivering a turnkey control design that allows for full customer manipulation.

Husky® D-Line, a mechanically well-built injection molding machine, has many control system design flaws. Husky® has stopped servicing these machines leaving customers in limbo between fixing or replacing these machines. That is where the JVH Engineering controls solution comes in. Purchasing this solution will fix the original flaws of your machine, while receiving full service and support from JVH Engineering on all controls needs.

Our solution is comprised of a full control upgrade as well as an optional servo valve replacement. The new cost-effective proportional valves will deliver fast, smooth, and quiet machine operation. Upgrading from the old control system to a new CompactLogix® system will also improve barrel and mold temperature response, creating a more repeatable production process.

Solution Features

Pre-designed Solutions

- Husky® E-Line
- Husky® D-Line
- Husky® G-Line
- Husky® Quadlock
- Husky® Tandem
- Demag / Van Dorn
- UBE Max Toggle
- Cincinnati / Milacron®

Feature 1

Ethernet Communication - Faster machine communication and full machine connectivity to data collection systems

Feature 2

Allen-Bradley VersaView® - Touch screen HMI equipped with a solid-state hard drive

Feature 3

Digital Sensors - Digital position sensors for more accurate, noise free, repeatable position control.

Feature 4

Valve Replacement - This optional feature provides high response stock proportional valves that not only increase control but reduce spare parts costs, include spool feedback and increase part repeatability. *Recommended

Feature 5

Part Consistency - High response injection control for exceptional part consistency by adding a new 10 segment injection fill velocity profile, 5 segment ramped hold profile, and 3 segment recovery profile with closed loop backpressure.

Feature 6

Setpoint tracking - Keep track of all changes made to your machine with the new JVH setpoint tracking feature.

Feature 7

Process Logging - This feature will allow for reduced setup time by saving every process while also allowing for process comparison.

Feature 8

Integrated Core Control - Advanced cores features that allow for full core manipulation without having any external control systems.

Feature 9

Integrated Sequential Valve Gates - This optional feature will allow for full sequential valve gate manipulation without having any external control systems.

Feature 10

Integrated Mold Heat Control - This optional feature will allow for full mold heat manipulation without having any external control systems. *Additional PLC may be required depending on number of mold heats.

Feature 11

Safety Upgrade - This optional feature will upgrade the PLC to an Allen-Bradley Compact GuardLogix® PLC and update the safety system to your desired standard.

Feature 12

Injection Manifold - Ductile iron manifold, function tested prior to shipping, utilizing standard Bosch Rexroth high speed proportional valves.

Feature 13

RFID Login - This optional feature will upgrade the HMI to allow everyone to skip the standard login procedure by simply swiping their card.

Feature 14

Valve Driver Replacement - This optional feature will upgrade the valve drivers from the archaic DIB Board to a new user friendly, repeatable, and adjustable, individual valve driver.
